

How to manually setup SSTP protocol on Mac

Here's how to configure PureVPN on your Mac device with the SSTP protocol.

Note: You would require Mac version El Capitan or above to proceed with this setup.

Things to Consider:

Before you begin, please make sure that:

- You have a working internet connection.
- A Mac Device
- Own a premium PureVPN account (If you do not already own one, you can buy a subscription from [here](#)).
- Download / install Easy SSTP from

1 Run Easy SSTP from Applications.

2 Provide your Mac password and click “OK”

3 Click on Easy SSTP icon from Menu bar and select "Configure..."

4 Click on “New”

5

Once the new windows opens, please enter the information mentioned below for the following fields:

- Connection Type: Password from drop-down menu
- Insert Connection Name: PureVPN SFTP
- Insert the desired server: [Click here](#) to get the server list
- Insert your username & password as provided by PureVPN. (For further instructions on how to check your active PureVPN username and password [click here](#).)
- Click on "Save".

6 Click on “Easy SFTP” icon from Menu bar and select newly created “PureVPN SFTP” connection.

7 You are connected now. Enjoy the FREEDOM!!!

8 Click on “Easy SSTP” icon from Menu bar and select “Shows status...” to verify connection.
