

Error 5085 - Windows

Description:

This is a DNS validity issue. It often occurs when the DNS configuration is faulty and is not validated

Recommended Actions:

You can resolve this error by changing your DNS configuration settings. To do so, follow the given steps:

- Search for Network and Internet settings in Start menu
- Select Ethernet Or Wifi network that you are connected with.
- Select Network and Sharing Center
- Select Change Adapter Setting
- Right-click on your connected network then select Properties
- In the following window, select Internet Protocol Version 4 (TCP/IPv4) and click Properties.
- Select the Use the following DNS server addresses option, and insert 8.8.8.8 in Preferred and 8.8.4.4 in Alternate DNS Box then click OK.
