3 Tap "Port Forwarding"

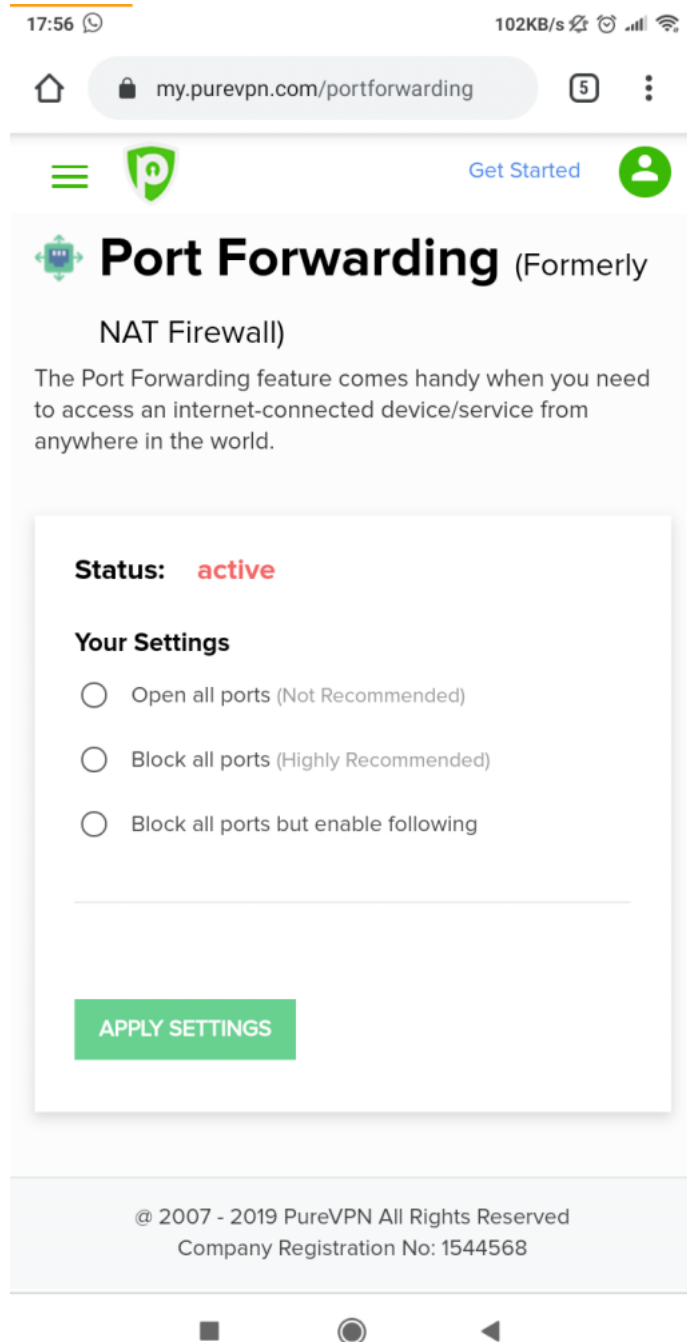

4 Tap “Configure”

5 Port Forwarding Settings

A new window will open Port Forwarding settings on your default browser and you can make desired changes.

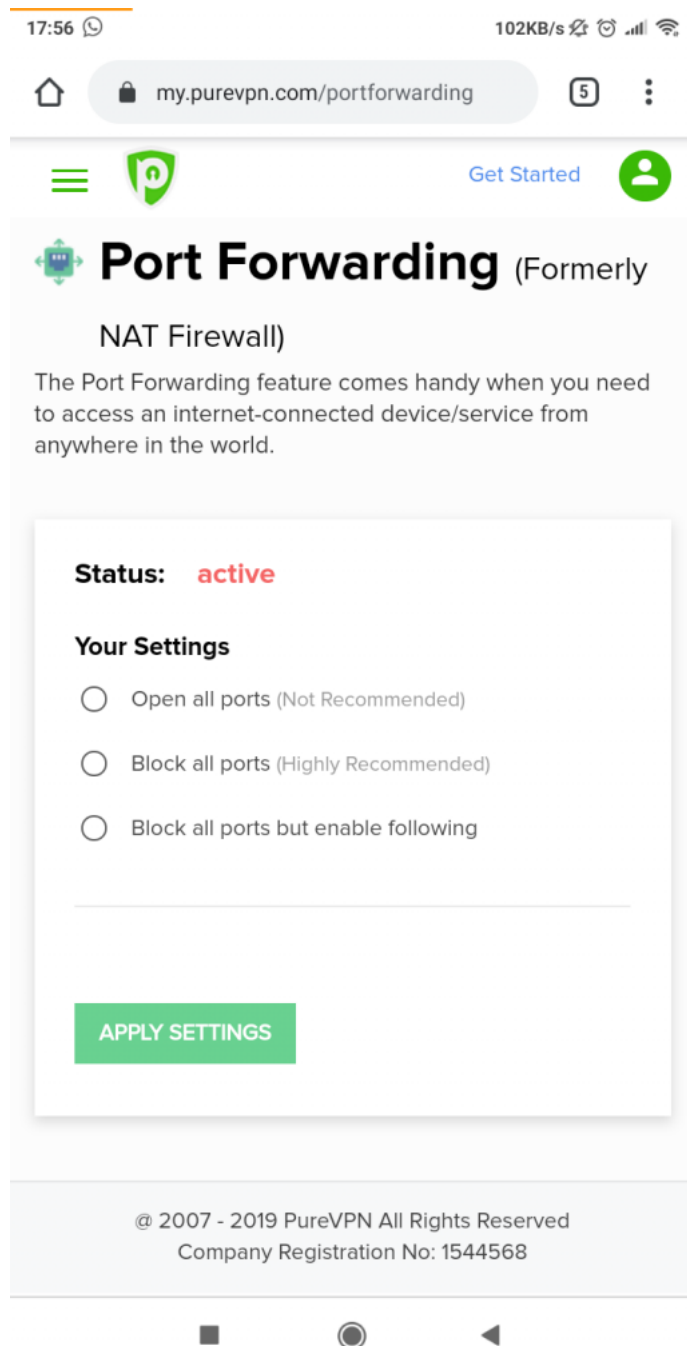

In order to have a better understanding of all options. You can refer to its details below:

Open All Ports: When this option is selected under settings. It allows all ports to be opened and you can transfer any data to any desired port.

Block All Ports: When this option is selected under settings. It allows all ports to be blocked and doesn't allow any internet traffic to be passed from the VPN connection.

Block all but enable specific: When this option is selected under settings. It allows ports to be blocked but making a few exceptions in which you can allow a specific port or multiple ports to be opened as per desire.

5 Click apply settings and it will apply to all device where you connect with PureVPN.

So, protect your system from unauthorized access through PureVPN's Port Forwarding/NAT Firewall Add-on and stay secure all the time!
