3 Tap "Port Forwarding"

4 Toggle the ON switch to Turn On Port Forwarding.

## 5 Port Forwarding Settings

A new window will open Port Forwarding settings on your default browser and you can make desired changes.

In order to have a better understanding of all options. You can refer to its details below:

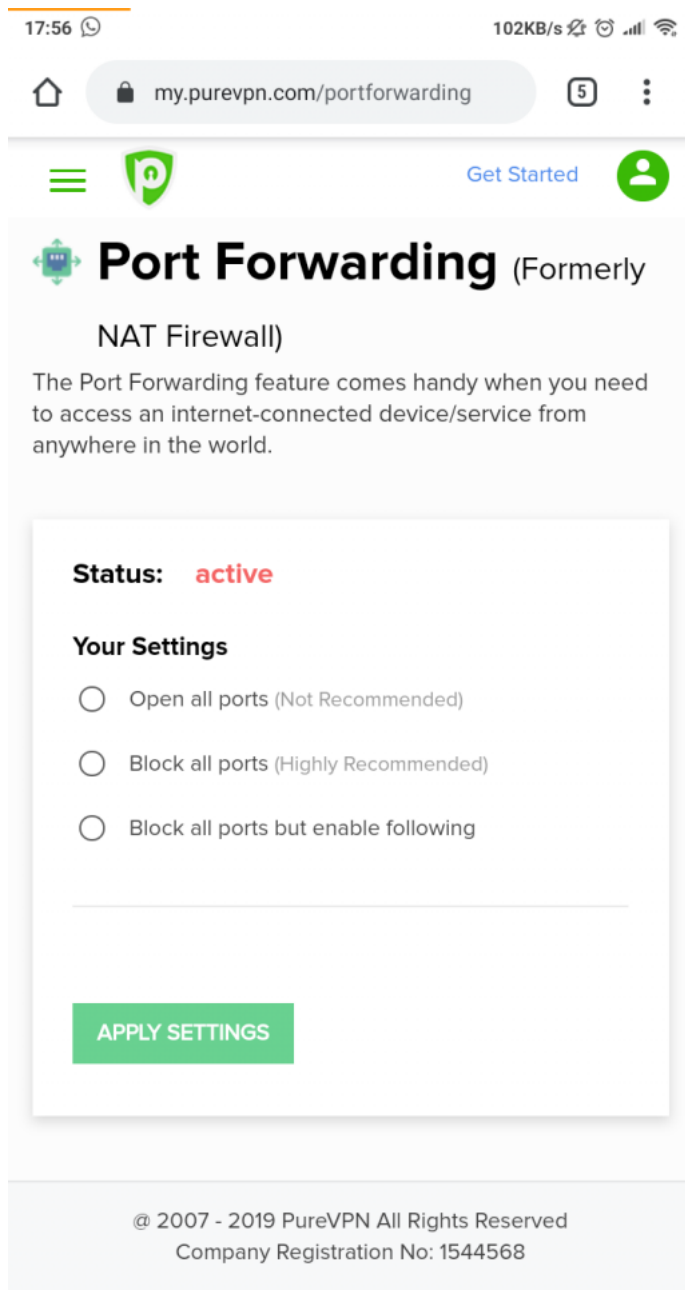

**Open All Ports:** When this option is selected under settings. It allows all ports to be opened and you can transfer any data to any desired port.

**Block All Ports:** When this option is selected under settings. It allows all ports to be blocked and

doesn't allow any internet traffic to be passed from the VPN connection.

**Block all but enable specific:** When this option is selected under settings. It allows ports to be blocked but making a few exceptions in which you can allow a specific port or multiple ports to be opened as per desire.

6 Click apply settings and it will apply to all device where you connect with PureVPN.

**Note:** Port Forwarding settings will apply to all devices wherever you connect PureVPN from.

So, protect your system from unauthorized access through PureVPN's Port Forwarding/NAT Firewall Add-on and stay secure all the time!
