

## How to configure PureVPN on Buffalo router

For maximum security, you can always configure VPN on your Buffalo router. However, if you are not sure how to make this possible, here is what you need to do:

### Things to Consider:

Before you begin, please make sure that:

- You have a working internet connection
  - VPN Supported Router.
  - Own a premium PureVPN account (If you do not already own one, you can buy a subscription from [here](#))
- 
- Please go through from the given description in image.

**Before you start, please make sure of the following:**

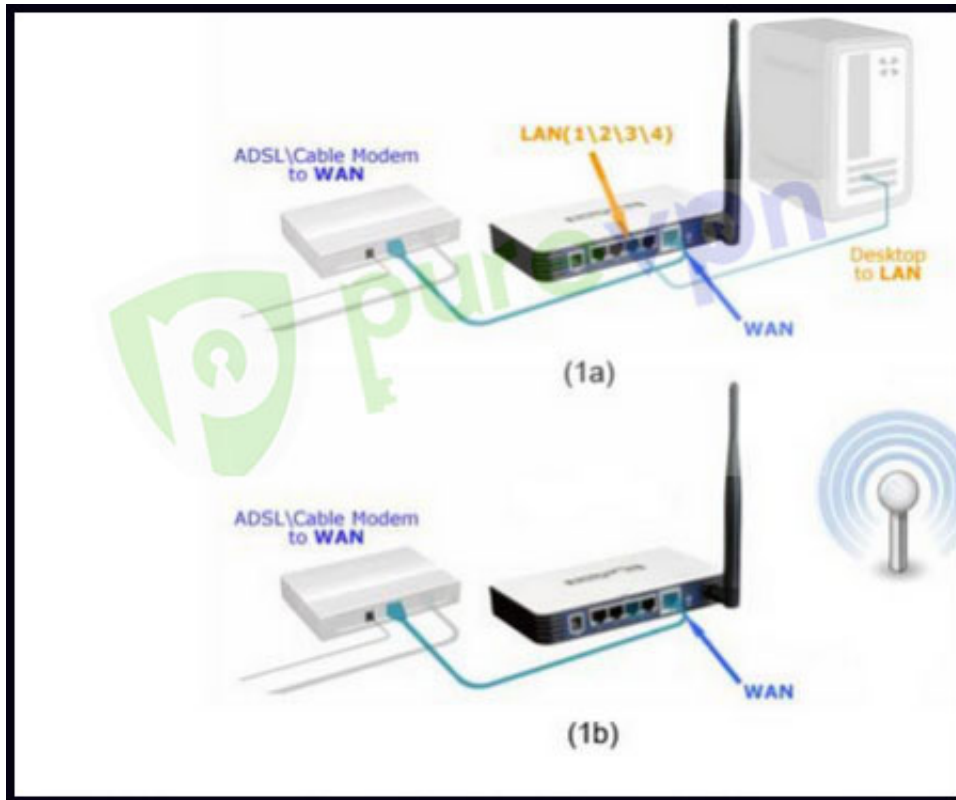

- ✓ You've VPN working on your computer (with PPTP). This basically confirms that your network supports VPN connections
- ✓ VPN can't be setup on the device that acts as your ISP modem. To setup DD-WRT, you'd need to have an additional router connected to your modem.
- ✓ Make sure you have network setup as shown graphically in the next setup.

- This image shows that how your VPN setup will look like:

1a. Shows an Ethernet connect from router to computer.

1b. Shows wireless connection from router to computer.

- Please note that in order to setup VPN on Buffalo Router, you must have DDWRT firmware installed on Buffalo Router. [Click here](#) for further instructions.
