

How to Disable IPv6 on Synology

Unfortunately, Synology DiskStation Manager (DSM) does not support IPv6 connections over a VPN. Therefore, you may have to disable the IPv6 option on Synology to prevent the IPv6 leak.

To do this, open Synology DSM's Control Panel. There:

- 1 click Network ? Network Interface.
- 2 Highlight the LAN interface and click Edit at the top.

- 3 Switch to the IPv6 tab and for IPv6 setup, select Off.
- 4 Confirm the new settings with OK.
