

How to enable Always-On VPN on PureVPN android app

Always-on VPN allows users to establish an automatic VPN connection when any internet activity is performed. In this way, a user is connected to the VPN all the time and it makes sure that no traffic is transferred through your public IP.

- Tap hamburger icon (?) from the top left.

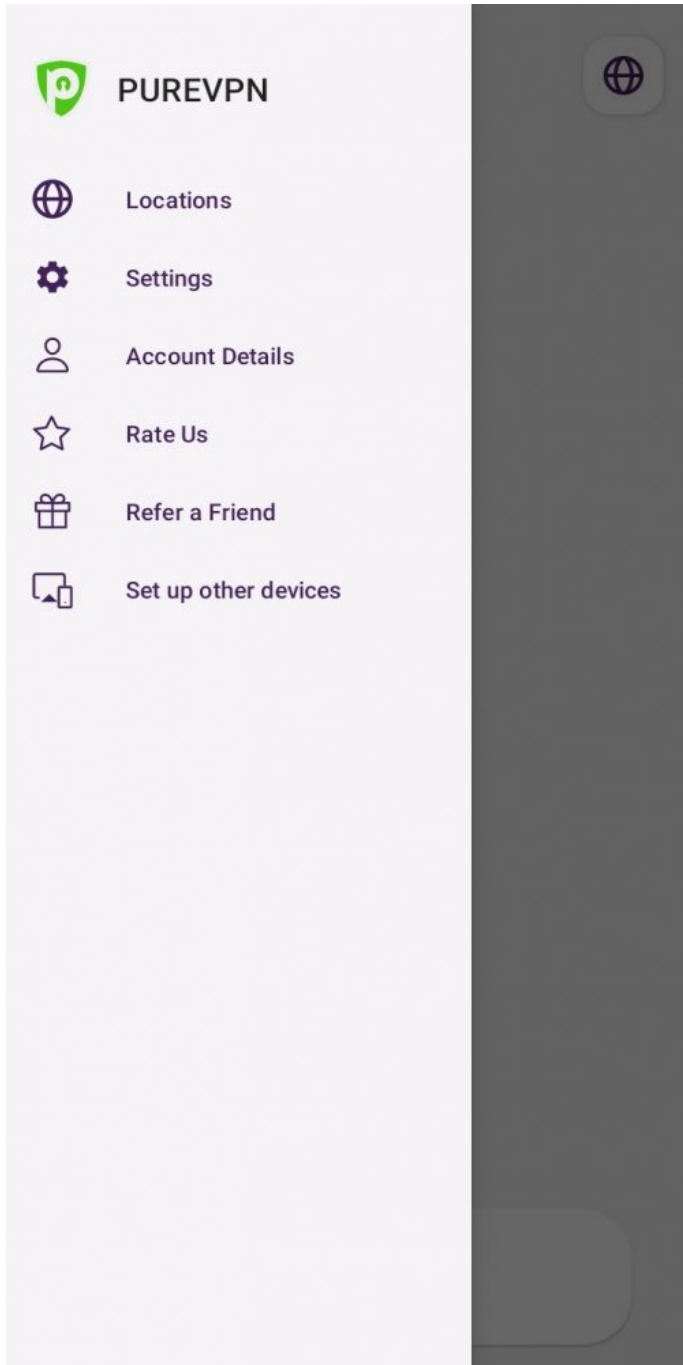

- Tap Settings.

PureVPN Support

Solution of Your Problems

- Tap Always-on.

- Tap Open Android Settings.

- Tap settings icon.

- Toggle Always-on VPN. Once you enable Always-on, then the VPN will be automatically connected.

- Toggle Block connections without VPN. You won't have an Internet connection until the VPN successfully connects.
