

How to Enable On-Demand VPN on PureVPN iOS App

A VPN on Demand is an always-on feature for your VPN in iOS, iPhone, or iPad devices and is an ingenious feature/ service for iOS devices. The technology makes sure that your internet traffic flows through the VPN network and your ISP network simultaneously. In this case, the VPN is established automatically when you visit websites that should open up with a VPN service connected to your Apple device. Basically, this feature makes sure you connect to your VPN before you visit any predefined websites. Now, let's move on to how you can enable this feature in the PureVPN iOS application.

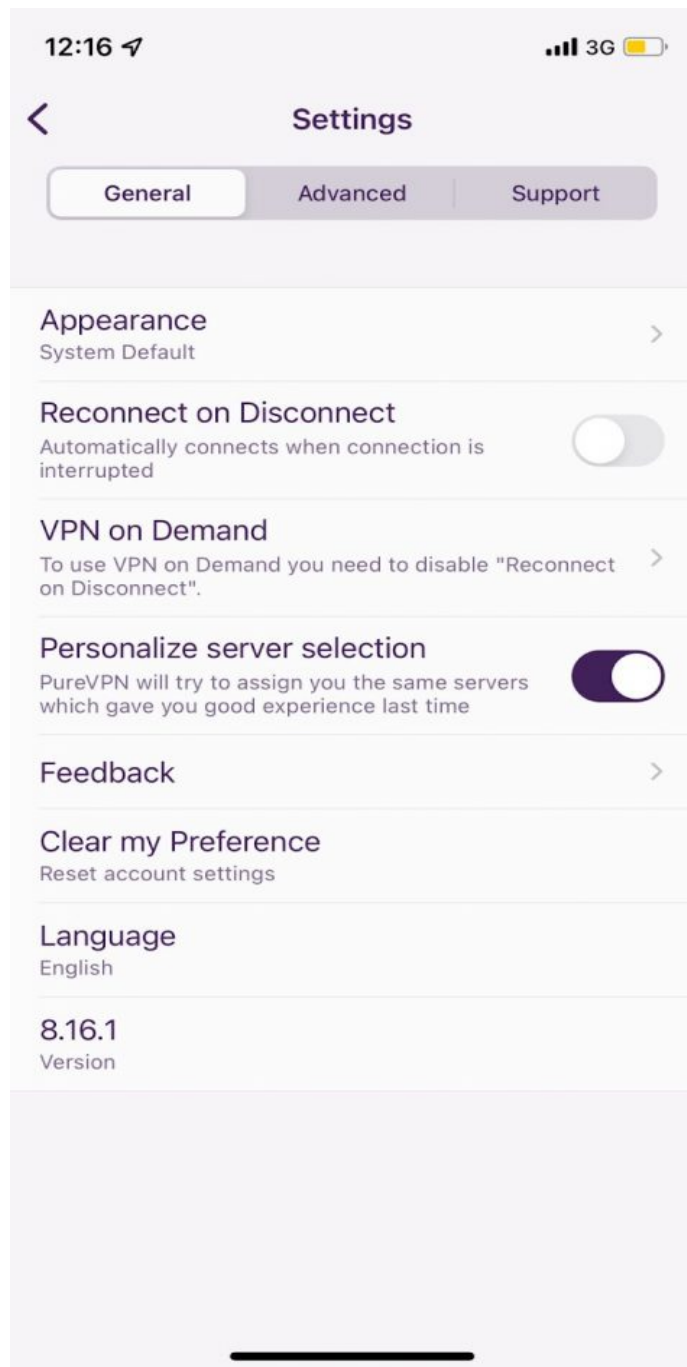

- Tap the hamburger icon (?) from the top left.

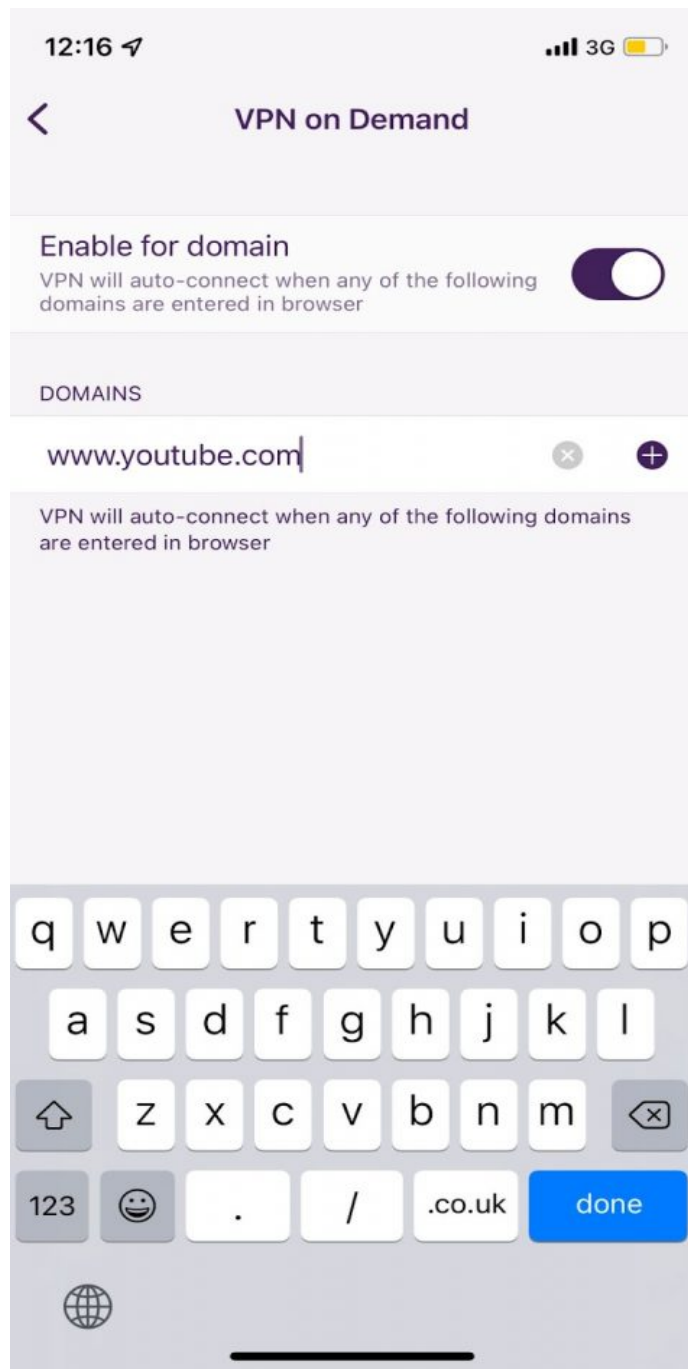

- Tap Settings

- In General settings, tap VPN on Demand.

- Toggle Enable for domain and type the domain you wish to add. (In this article we have used www.youtube.com as an example)
