

How to Setup OpenVPN on Kali Linux

This guide will walk you through setting up OpenVPN on Kali.

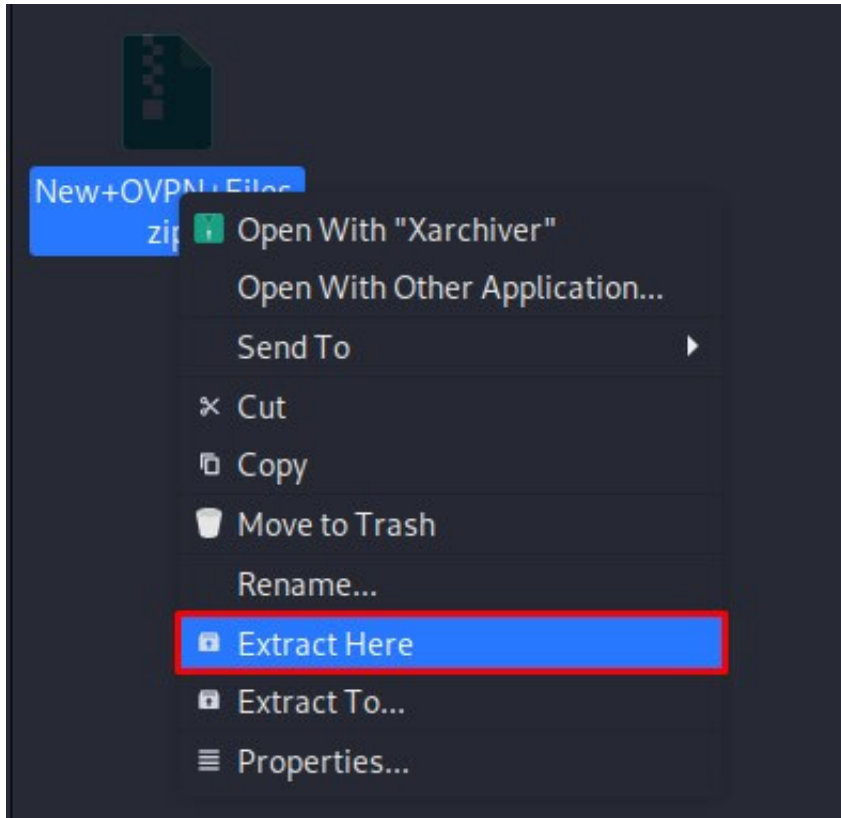

Before beginning to set up OpenVPN on a device running on Kali, you need to make sure you have a premium PureVPN account and the required OpenVPN configuration files.

1 The OpenVPN configuration files can be obtained by [clicking here](#). Use your preferred browser to download the ovpn zip file.

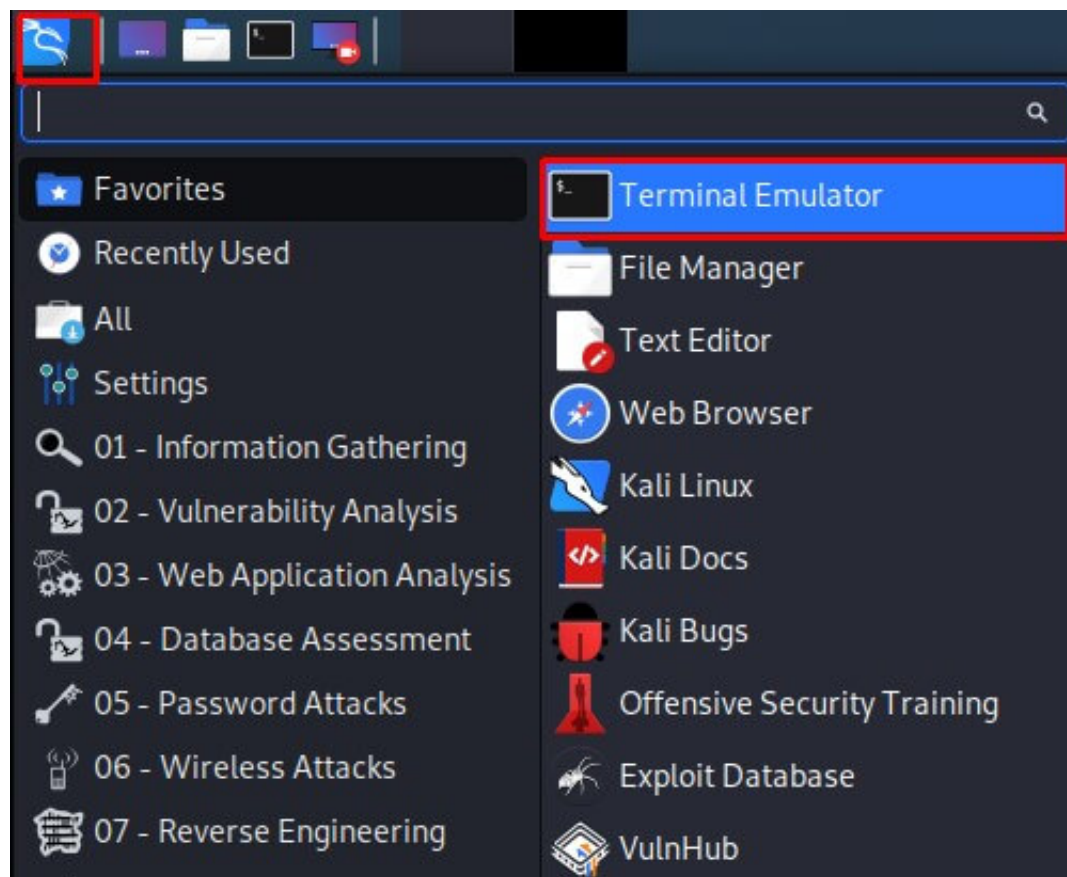

You will get a prompt asking what to do with the ZIP archive, select “Save File” and click “OK”. It should be downloaded to your “Downloads” directory.

2 Go to your “Downloads” directory, right click the ZIP archive and select “Extract Here” to extract the files.

3 Now go to the **'Menu'** option and search and open the **'Terminal Emulator'**

4 Now you need to install OpenVPN packages. Type the following commands one by one:

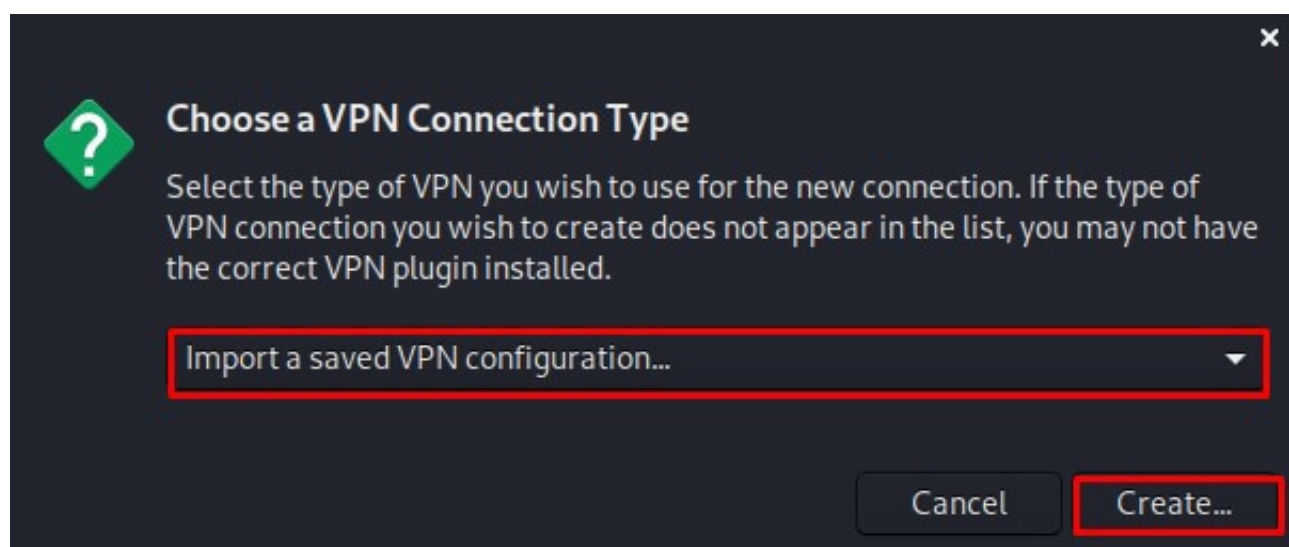

- **sudo apt-get update**
- **sudo apt-get install network-manager-openvpn**
- **sudo apt-get install network-manager network-manager-gnome network-manager-openvpn-gnome**

5 Select the following options:

- Click on “**Ethernet Network Connection**”
- Go to “**VPN Connections**”
- Select “**Add a VPN Connection...**”

6 Select 'Import a saved VPN configuration' option. Click on the "Create" button.

7 Go to the **Downloads** directory, select the folder containing OpenVPN files i.e. 'New OpenVPN Files'. Select the desired file with ".ovpn" extension. Click "Open" button.

Cancel Open

8 Now enter the details as mentioned below:

Insert Connection name: **PureVPN** (Here we use PureVPN, you can change it any other name)

- Select Type: **Password** from drop down menu
- Insert **Username** provided by **PureVPN**
- Insert **Password** provided by **PureVPN**
- Click on folder icon from Certificate folder and add the '**ca.crt.crt**' file.
- Click on '**Save**'

9 Now go to the "Ethernet Network Connections" option and under "VPN Connections" click/check on the newly created "PureVPN" connection to activate VPN.
