

How to Setup OpenVPN on Xubuntu 19.10

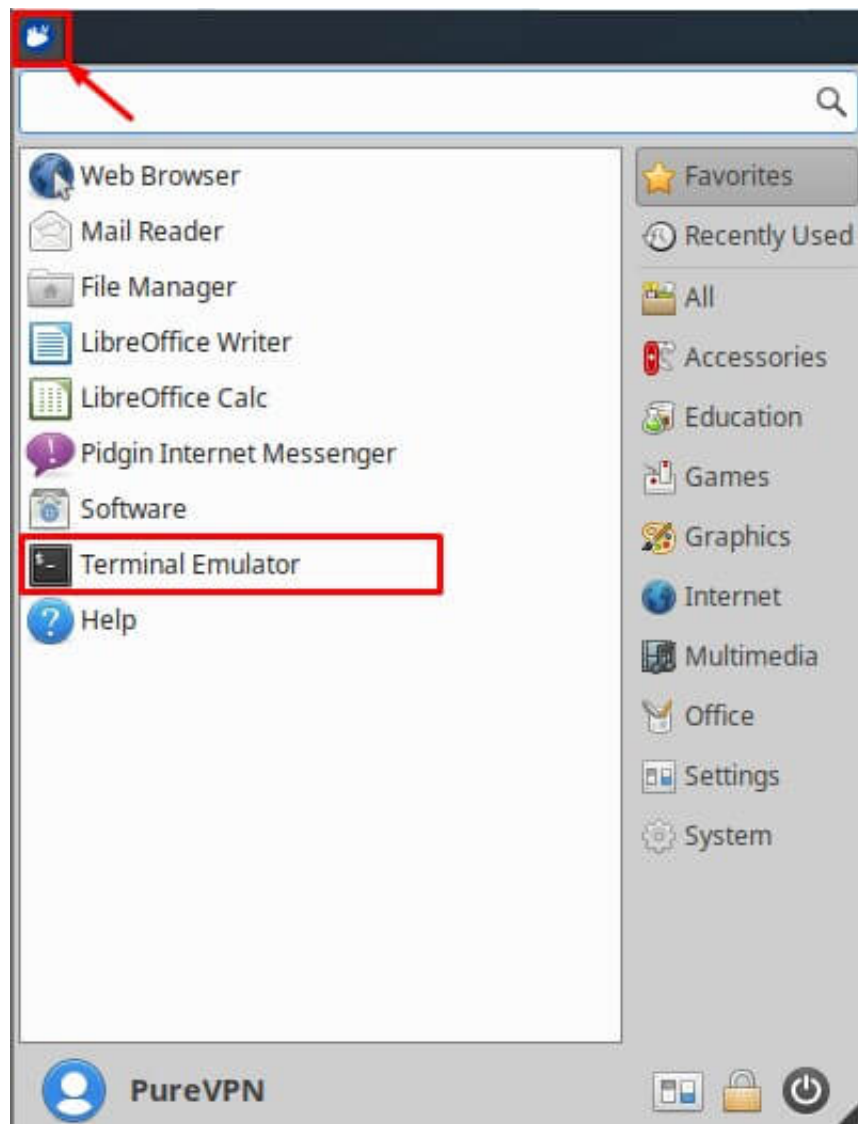

The following is required for OpenVPN client to work on Linux Xubuntu:

- A working installation of Linux Xubuntu (This guide uses Linux Xubuntu 19.10 64-bit)
- A device with internet access.
- Own a premium PureVPN account (If you do not already own one, you can buy a subscription from [here](#))

1 First, open the web browser (Firefox) and download the PureVPN OpenVPN configuration files by [clicking here](#) and extracting them.

2 Go to the “**Launcher**” option and select/open the “**Terminal Emulator**” from there.

3 Now you need to install OpenVPN packages. Type the following commands one by one:

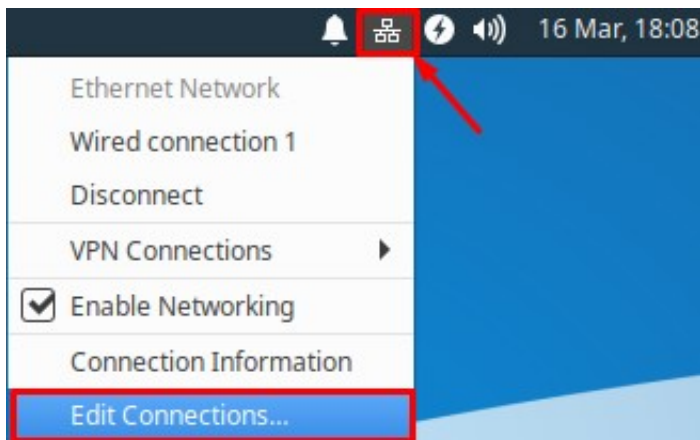

- **sudo apt-get update**
- **sudo apt-get install openvpn**
- **sudo apt-get install network-manager-openvpn**
- **sudo apt-get install network-manager-openvpn-gnome**

4 Click on “**Network**” option and then select “**Edit Connections...**” option.
