

## How to Setup PureVPN L2TP on Xubuntu 19.10

The following is required for L2TP-VPN client to work on Linux Xubuntu:

- A working installation of Linux Xubuntu (This guide uses Linux Xubuntu 19.10 64-bit)
- A device with internet access.
- Own a premium PureVPN account (If you do not already own one, you can buy a subscription from [here](#))

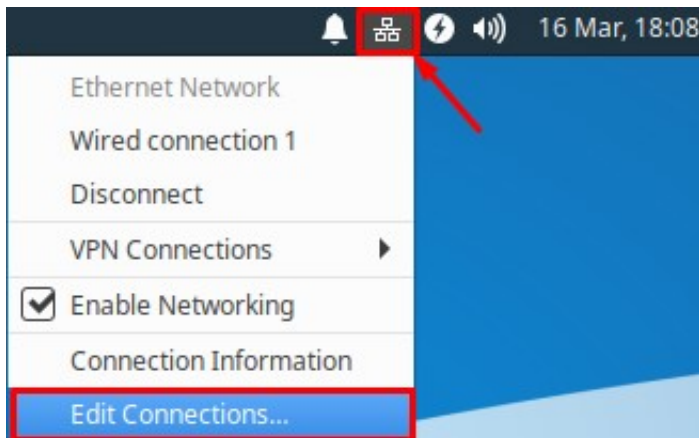

1 Go to the “Launcher” option and select/open the “Terminal Emulator” from there.

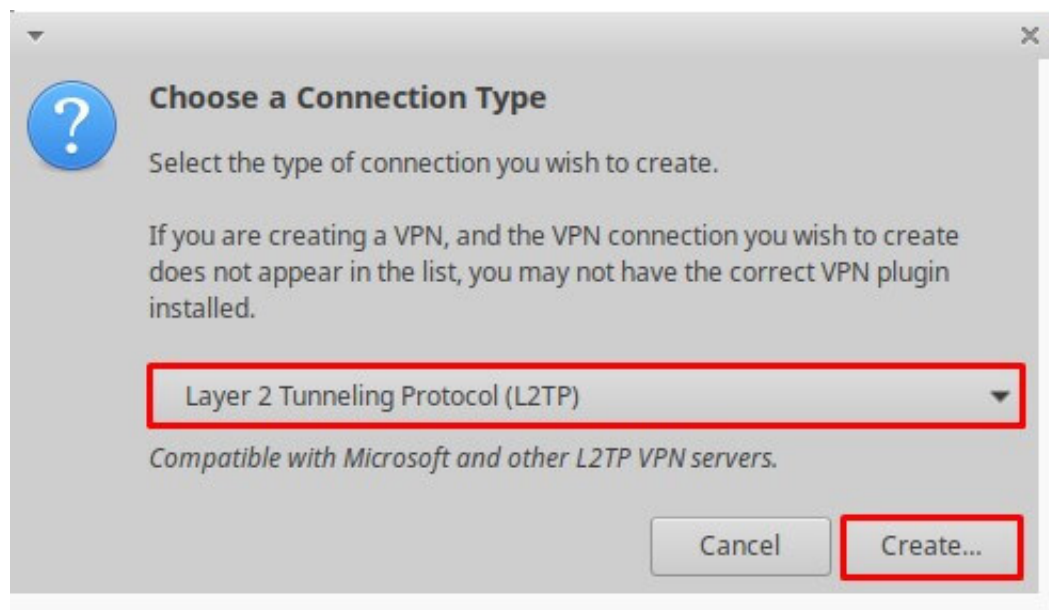

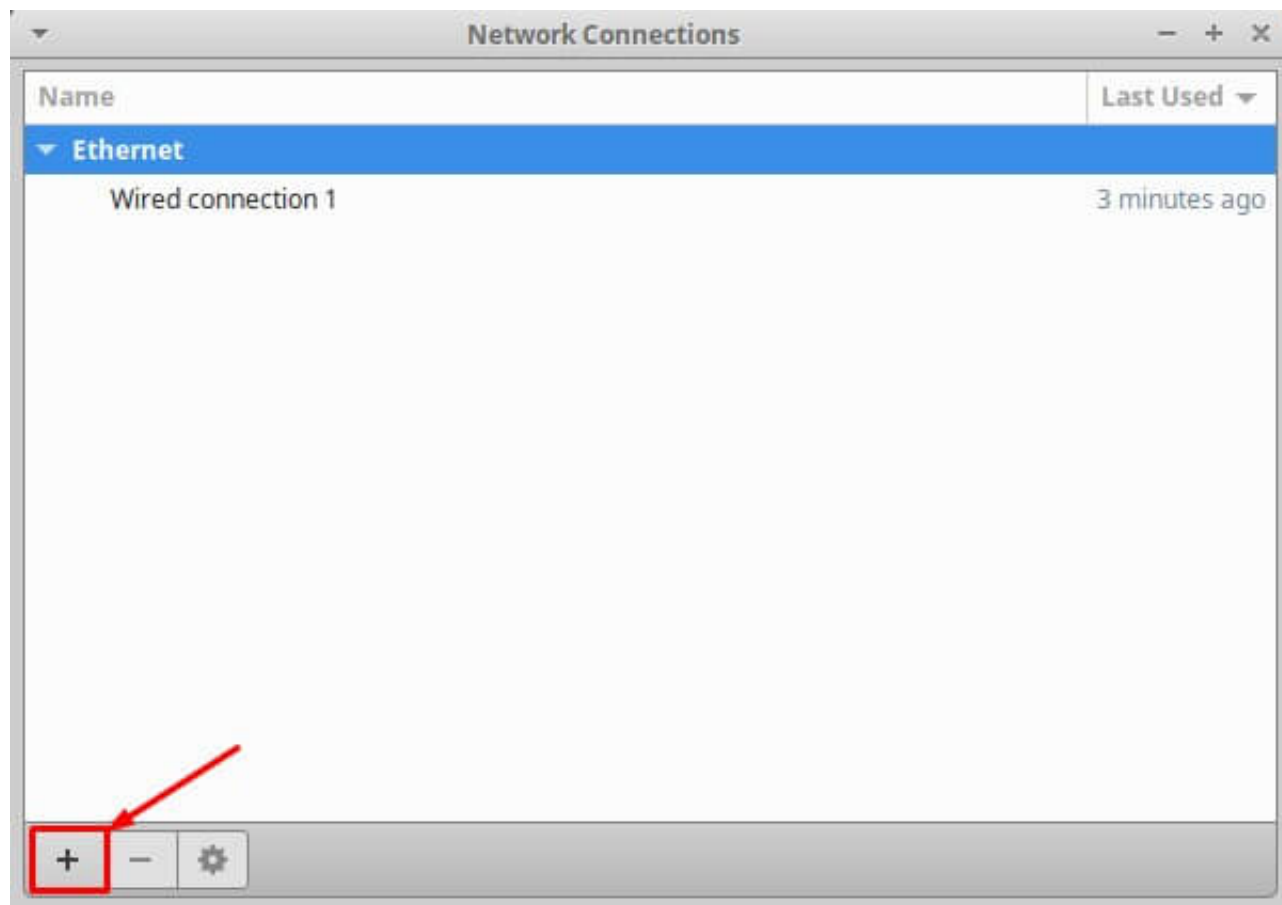

2 Now you need to install L2TP packages. Type the following commands one by one:

- **sudo apt-get update**
- **sudo apt-get install xl2tpd**
- **sudo apt-get install network-manager-l2tp-gnome**
- **sudo apt-get install network-manager-l2tp**

3 Click on “Network” option and then select “Edit Connections...” option

4 Click on the ‘+’ icon to add a VPN connection and select ‘Layer 2 Tunneling Protocol (L2TP)’ from the drop-down list and click on “Create” button

5 Insert the following info:

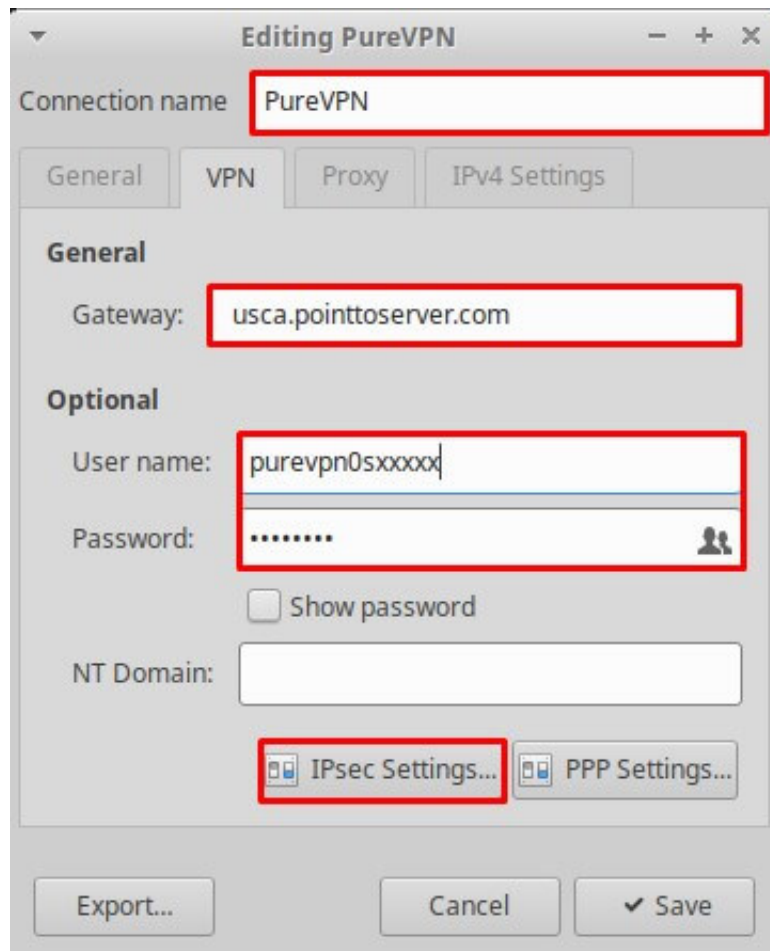

## PureVPN Support

Solution of Your Problems

<https://support.purevpn.com>

---

- Insert Connection name: PureVPN
- Insert Gateway: usca.pointtoserver.com (Here we use usca.pointtoserver.com you can also use your desired server address, [click here](#) to view the complete list)
- Insert Username provided by PureVPN
- Insert Password provided by PureVPN

6 Now, Go to the 'IPsec Settings...' option.

Check the 'Enable Ipsec tunnel to IPsec host'

Pre-share key: 12345678

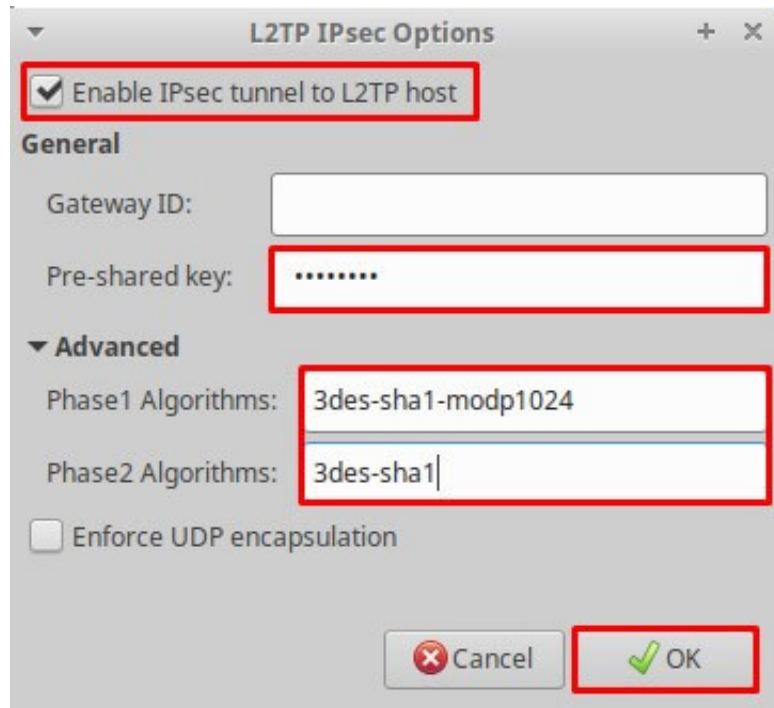

Then specify connection algorithms in Advanced section:

For phase 1= 3des-sha1-modp1024 and

For phase 2 = 3des-sha1

Enforce UDP Encapsulation: Unchecked

Click 'OK'

Now, go to the 'PPP Settings...'.

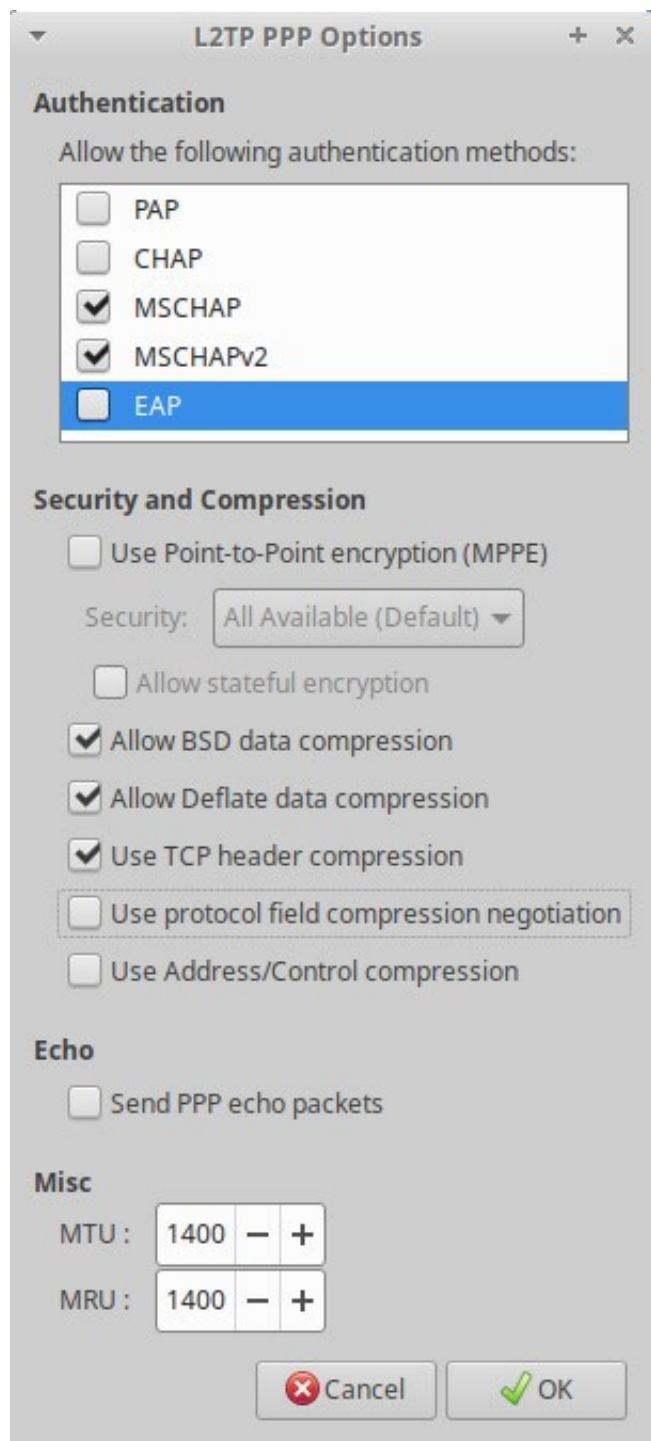

Only allow the following options:

- MSCHAP
- MSCHAP2

Also, select the following:

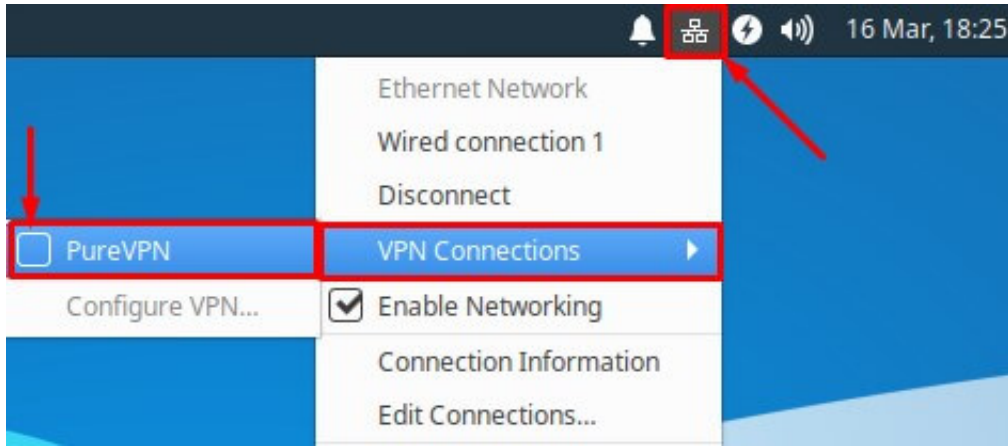

- Allow BSD data compression
- Allow Deflate data compression
- Use TCP header compression

Click "OK"

7 Click "Save" and close the "Network Connections" window.

8 Now click the "Network" Icon, go the "VPN Connections" tab and click on the newly created VPN connection, to connect to PureVPN.

9 You are now connected to PureVPN!
