

How to setup PureVPN SSTP on Kubuntu

If you want to set up PureVPN on Kubuntu using the SSTP protocol, you can do so in a few steps by checking out the following guide:

1 Open the “Konsole” from the Task bar.

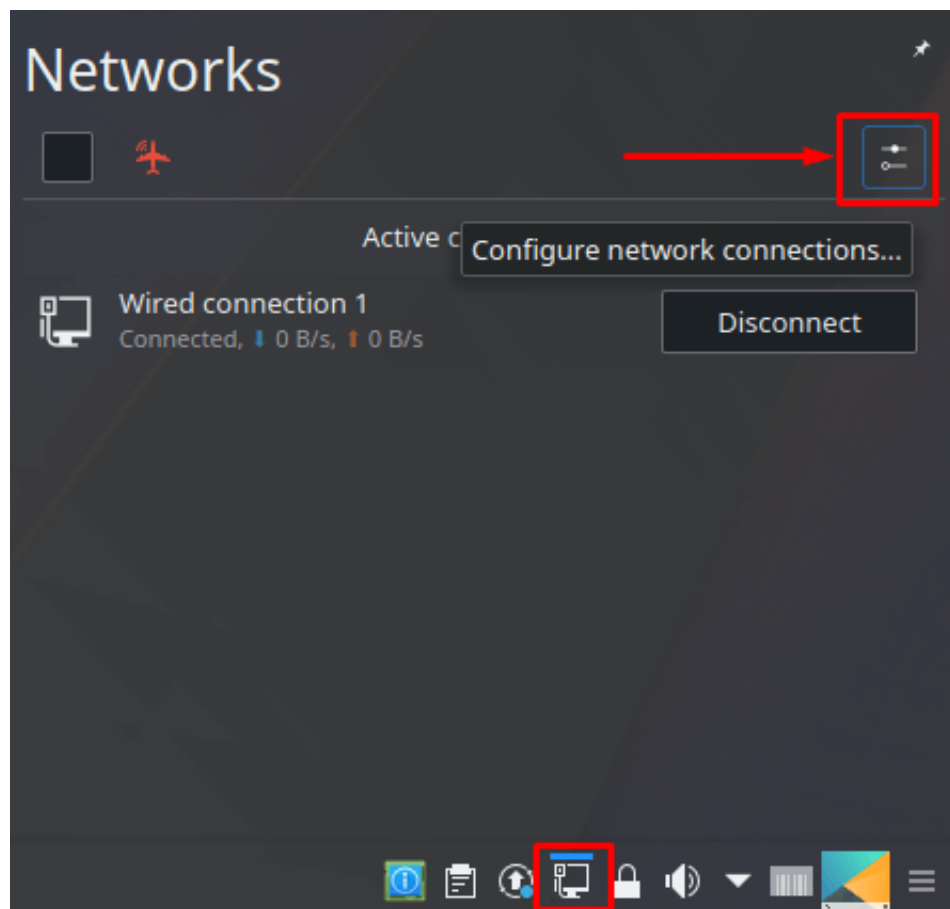

2 Now to install SSTP dependencies type following commands one by one:

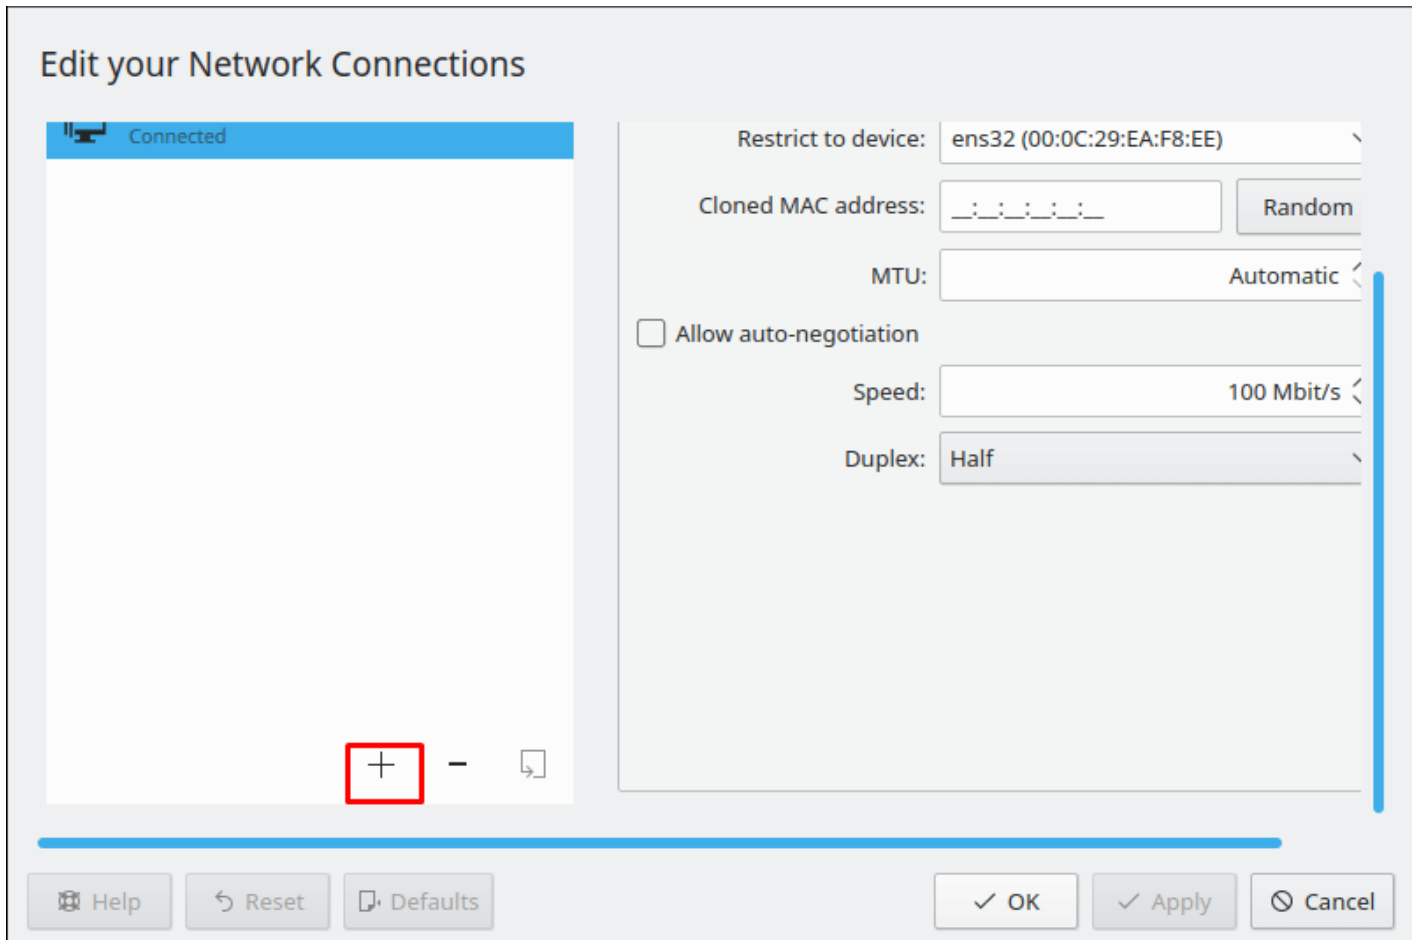

- **sudo bash**

- **sudo add-apt-repository ppa:eivnaes/network-manager-sstp**
- **sudo apt-get update**
- **sudo apt-get install network-manager-sstp**

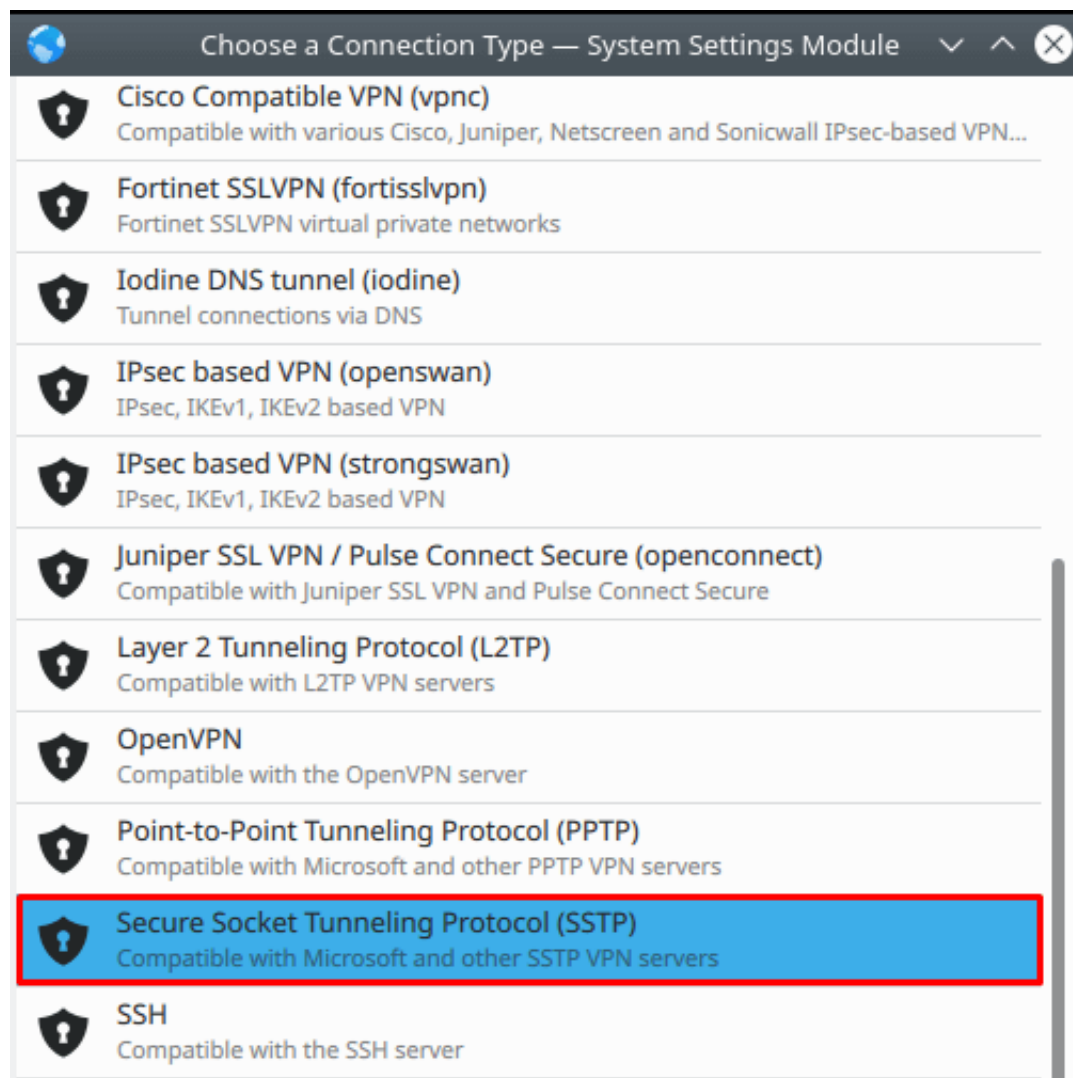

3 Click on “**Networks**” Icon and select the “**Configure Network selection**” option.

4 Click on the ‘+’ icon to add a VPN connection.

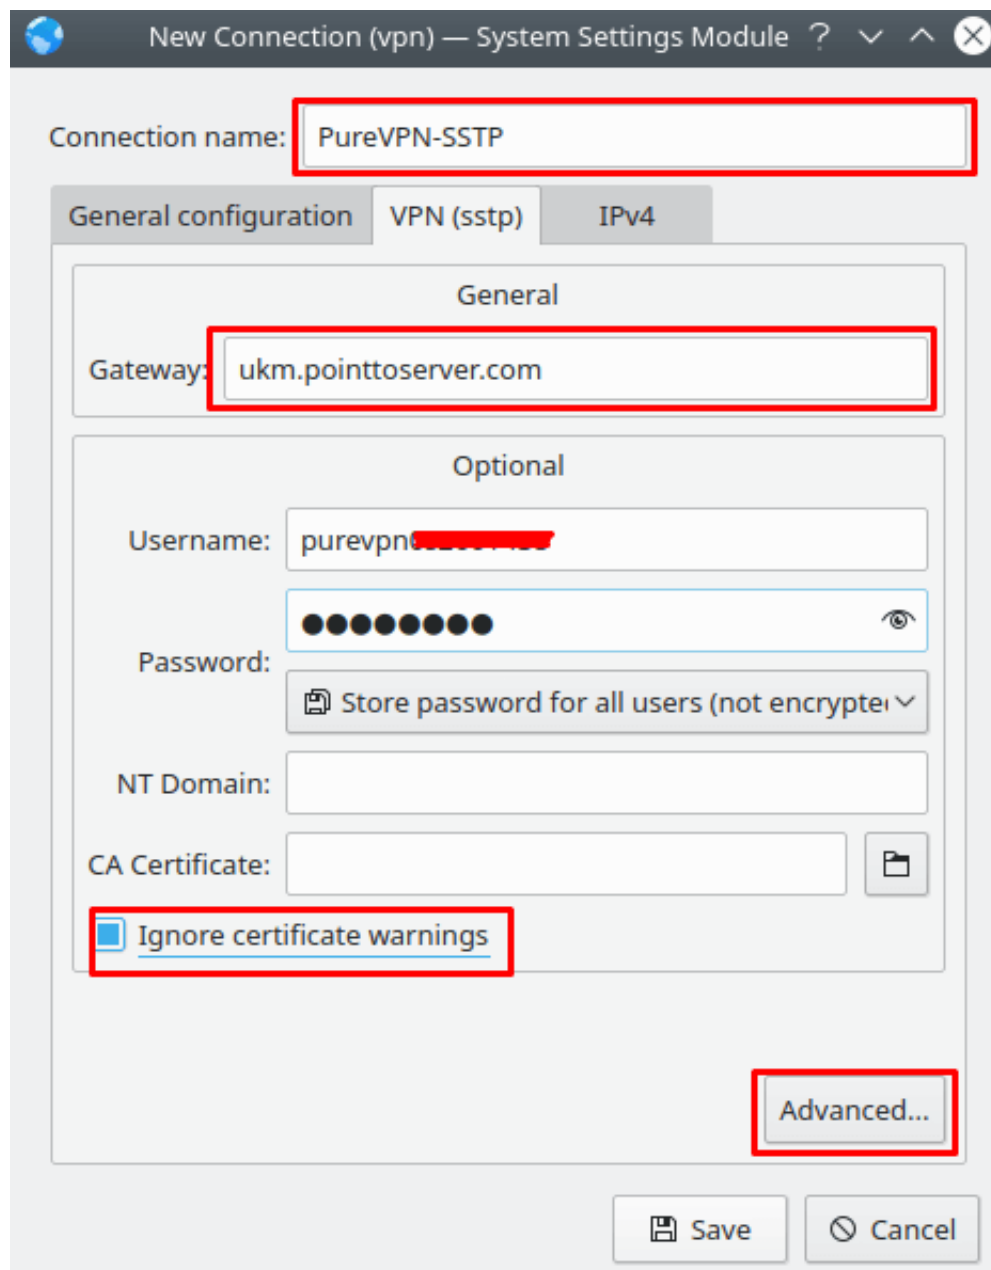

5 Select "Secure Socket Tunneling Protocol (SSTP)" as your connection type.

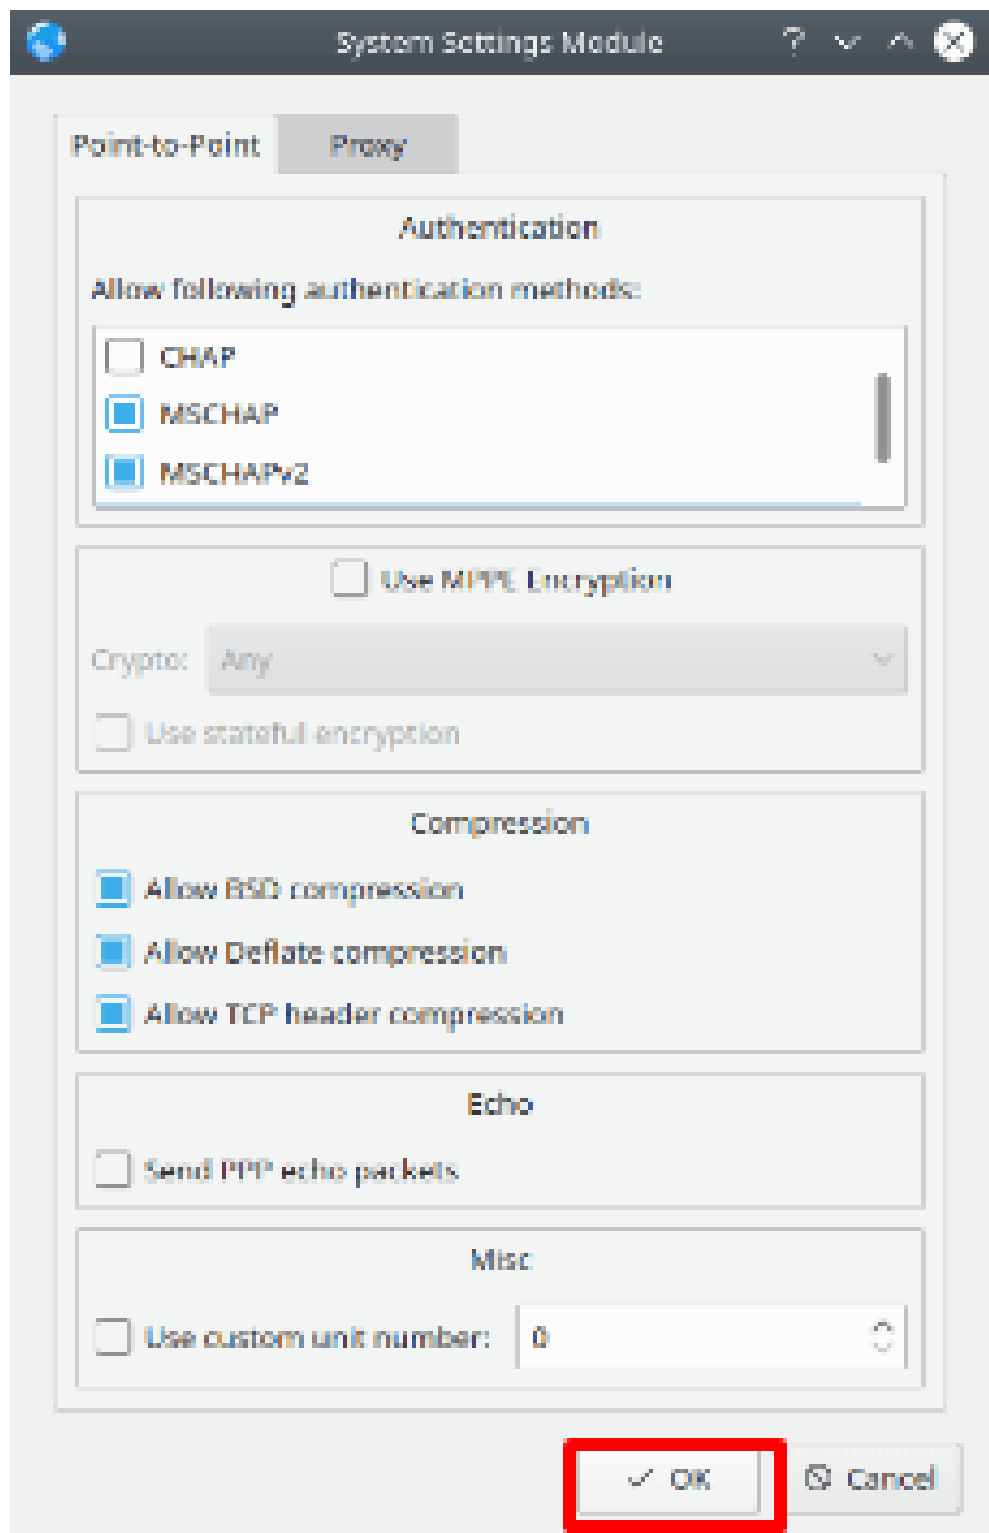

6 Now Enter the following details:

- Insert desired server address in “Gateway” (Here we have used: ukm.pointtoserver.com)
- [Click here](#) to check more server addresses.
- Insert **Username** provided by **PureVPN**
- Insert **Password** provided by **PureVPN**
- Check the ‘**Ignore Certificate Warnings**’ option
- Click on “**Advanced...**”

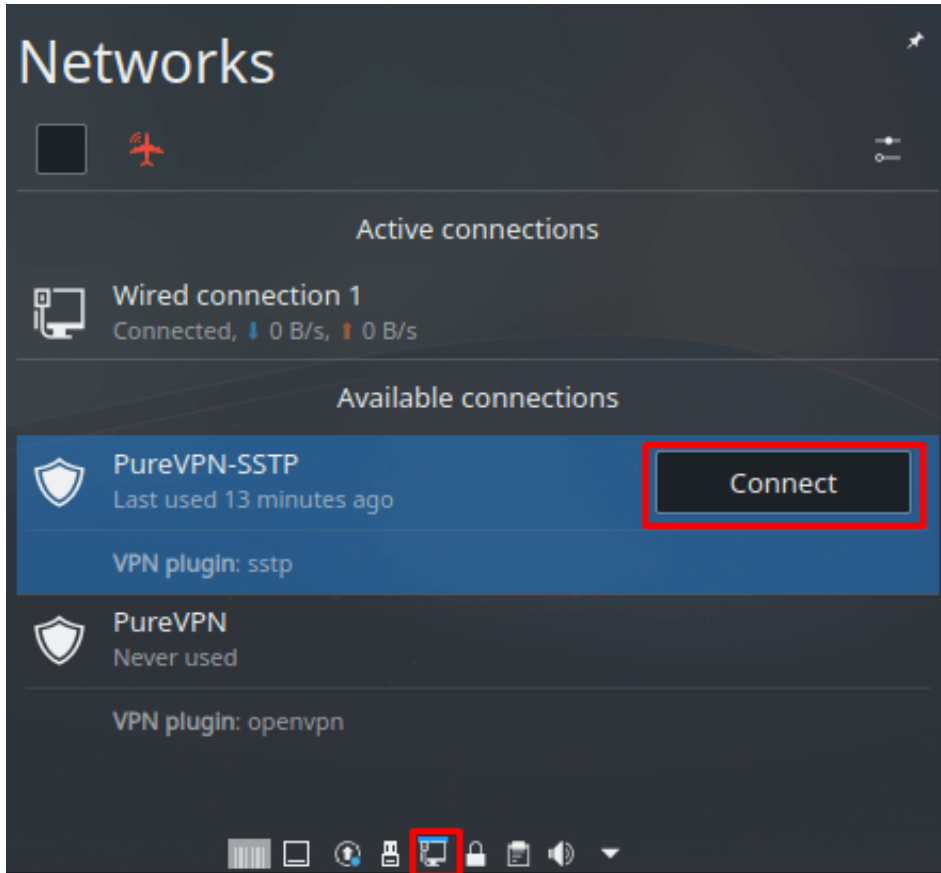

Check the following options:

- MSCHAP
- MSCHAP2
- Allow BSD compression
- Allow Deflate compression
- Allow TCP Header compression
- Click "OK" and then "Apply" to save the profile

7 Now Click on “**Networks**” Icon and select the newly created VPN connection, click on “**Connect**” button to connect to PureVPN.

7 You are successfully connected to VPN now!
