

## How to Setup PureVPN SSTP on Linux Mint 19.3

If you want highest security, you can set up PureVPN using the SSTP protocol on Linux Mint. Here are a few simple steps you can get started:

1 Go to the 'Menu' option and search and open the 'Terminal'.

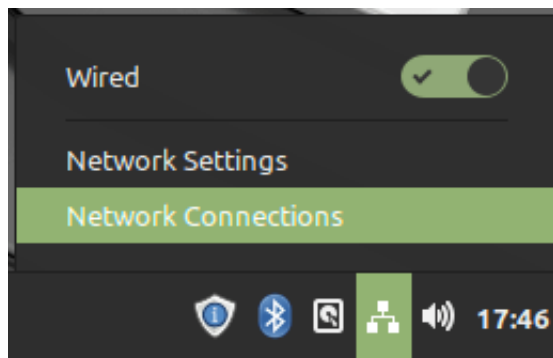

2 Now, you need to install SSTP module. Type the following commands one by one:

1. **sudo add-apt-repository ppa:whoopie79/testing**
2. **sudo apt-get update**
3. **sudo apt-get install sstp-client**
4. **sudo apt-get install network-manager-sstp**
5. **sudo apt-get install network-manager-sstp-gnome**

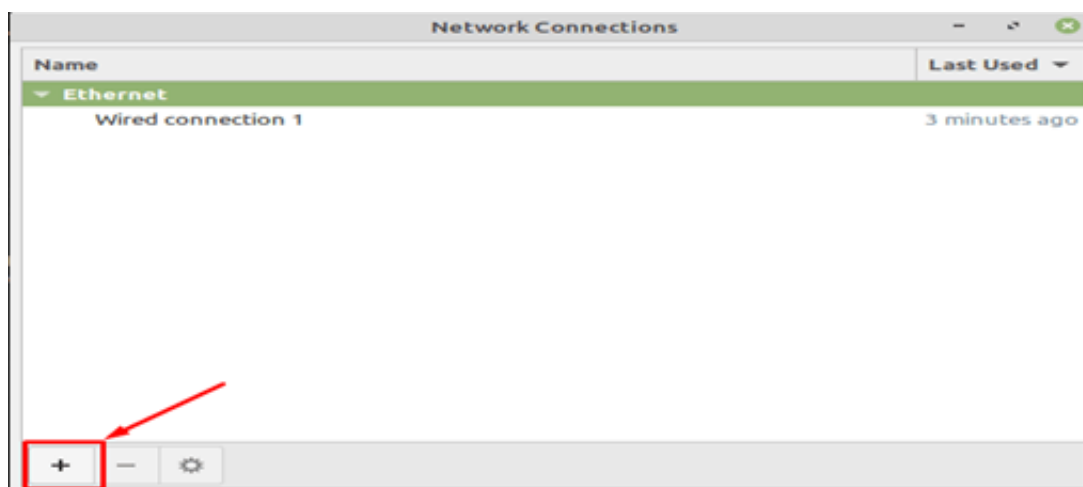

When you're finished, logout/login is required. (Or preferably, restart the system).

3 Now Select the following options:

- Click on "Wired Connection"
- Go to "Network Connections"

4 Click on the '+' icon to add a VPN connection and select '**Point-to-Point Tunneling Protocol (SSTP)**' option. Click on the "**Create**" button

5 When the a window appear, complete the fields as below:

- Insert Connection name: **PureVPN**
- Insert Gateway: **usca.pointtoserver.com** (you can use your desired server address here, in order to see the complete list [click here](#))
- Insert **Username** provided by **PureVPN**
- Insert **Password** provided by **PureVPN**
- Check **Ignore certificate warnings** option.
- Click **Save**.

The screenshot shows a dialog box titled "Editing PureVPN-SSTP". It has four tabs: "General", "VPN", "Proxy", and "IPv4 Settings". The "VPN" tab is selected. The "General" section contains the following fields and options:

- Connection name:** PureVPN-SSTP
- Gateway:** usca.pointtoserver.com
- User name:** purevpn0 [redacted]
- Password:** [redacted]
- Show password
- NT Domain:** [empty]
- CA Certificate:** (None)
- Ignore certificate warnings
- Use TLS hostname extensions
- Advanced...** button

At the bottom of the dialog, there are two buttons: "Cancel" and "Save". The "Save" button is highlighted with a red box.

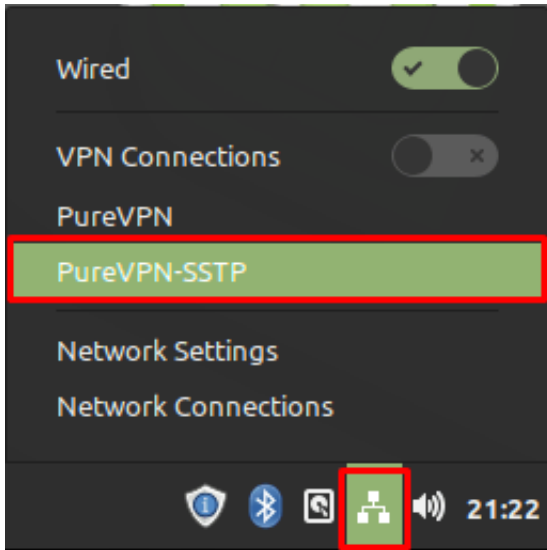

6 Go to **Wired Connections** option and under **VPN Connections** click on the newly created **PureVPN-SSTP** connection to activate VPN.
