

OpenVPN Guide for iPad / iPhone

OpenVPN is an open-source security protocol that creates secure point-to-point connections in routed and remote access facilities. Here's how you can setup OpenVPN on your iPad and iPhone:

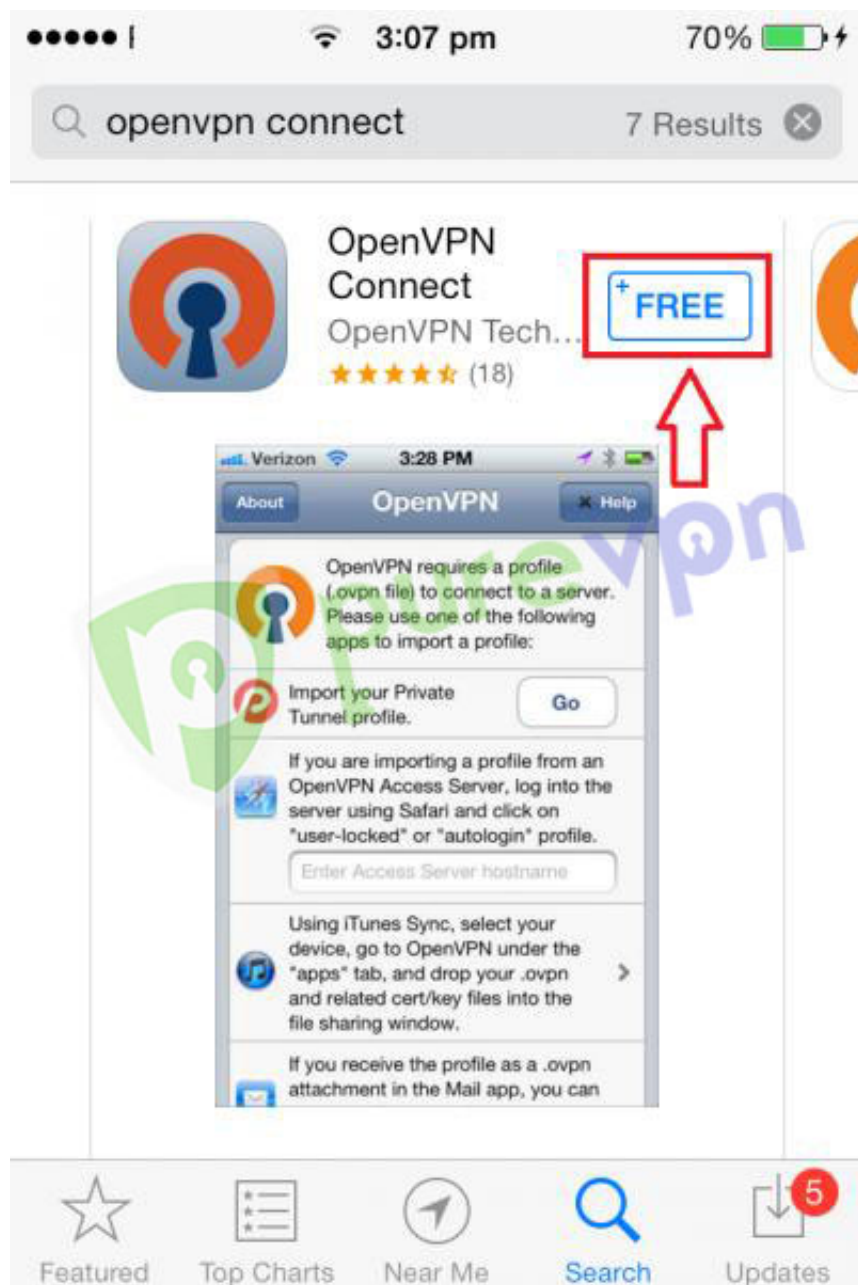

Things to Consider:

Before you begin, please make sure that:

- You have a working internet connection
- An iOS device (Smartphone, Tablet etc.)
- A Premium PureVPN account (if you haven't bought yet [click here](#) to buy)

To configure **OpenVPN** on **iOS** device you need to install **OpenVPN Connect App** and download the **OpenVPN files** from [here](#)

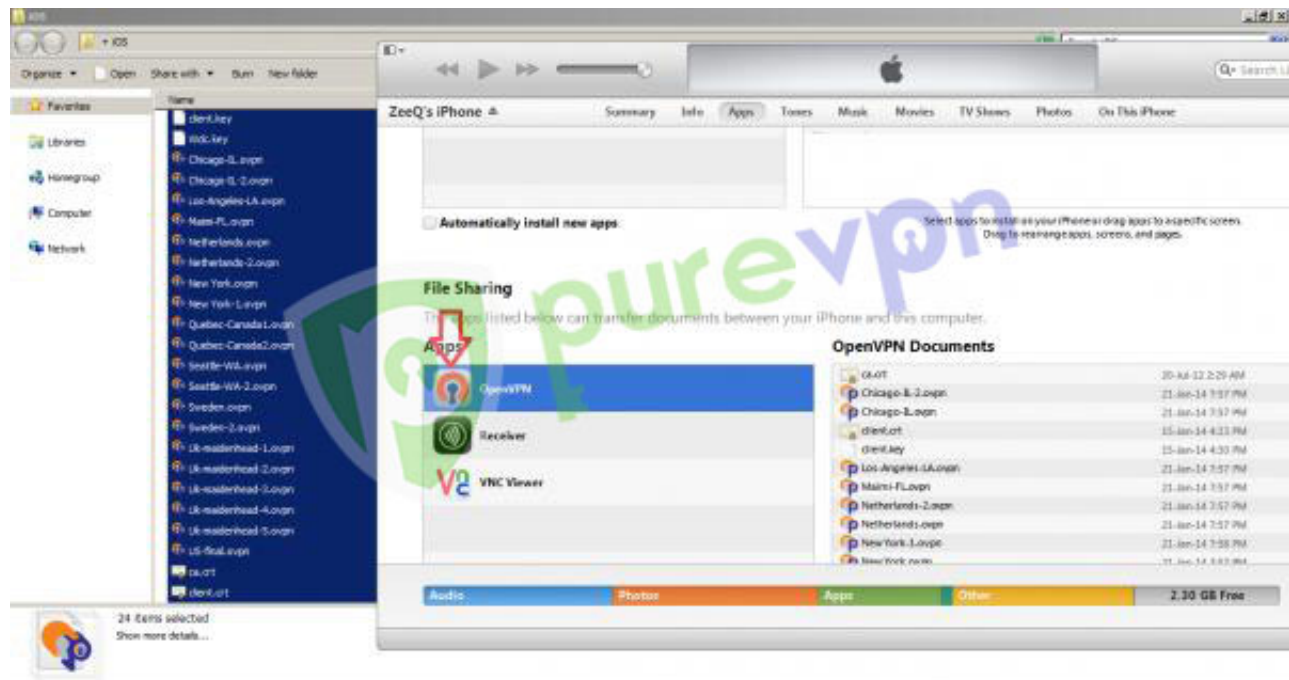

1 Open **App Store** and search for **OpenVPN Connect App** or Click [here](#) from your iOS device to download / install it

2 Perform the following:

- Connect your **iOS device** to PC / Mac and launch iTunes
- From iTunes Apps section select **OpenVPN App**
- Select downloaded **OpenVPN Files** including Ca.crt, WDC.key, Client.crt and Client.key from your **PC / Mac**, drag and drop them to **OpenVPN Documents**

(Try TCP and UDP both and use the one which works fine on your internet connection)

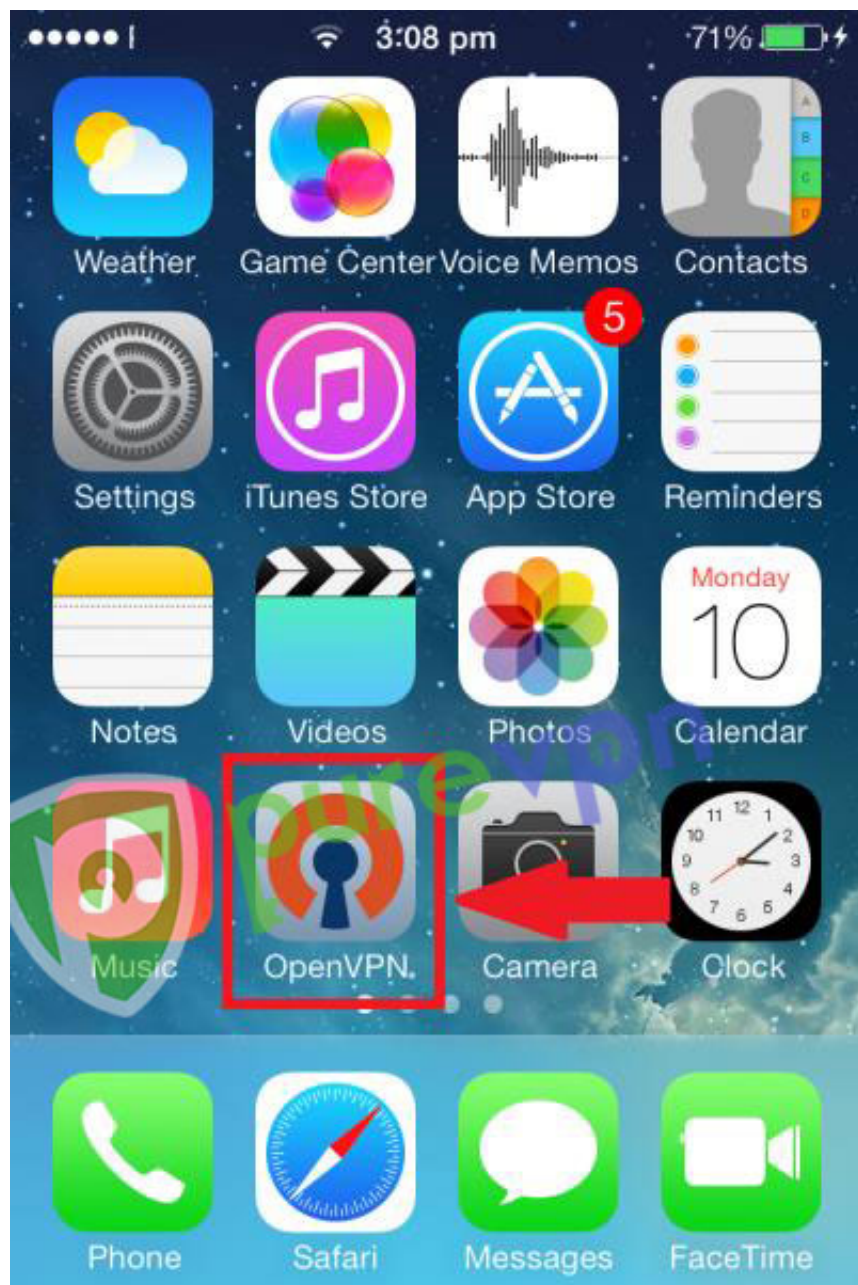

3 Now tap on **OpenVPN** app from your iPad / iPhone

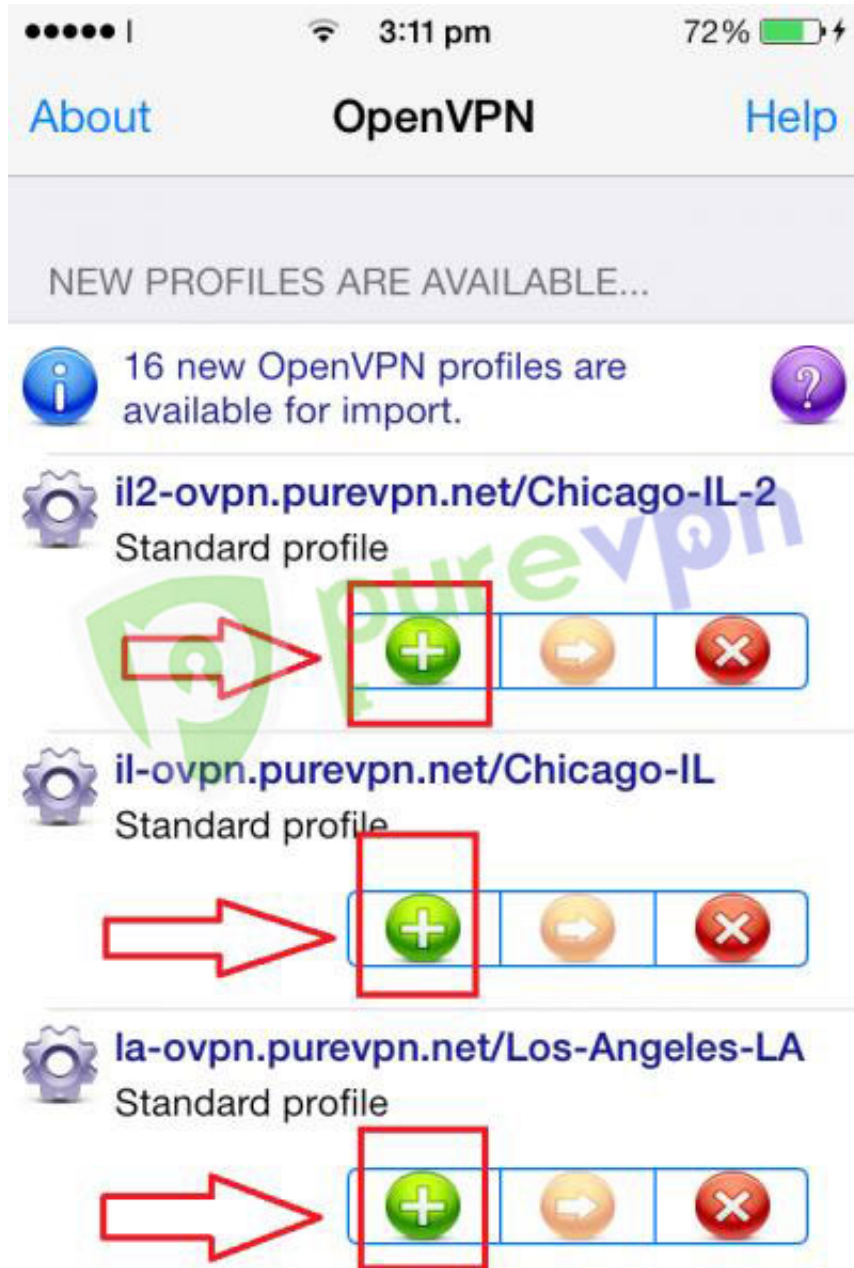

PureVPN Support

Solution of Your Problems

<https://support.purevpn.com>

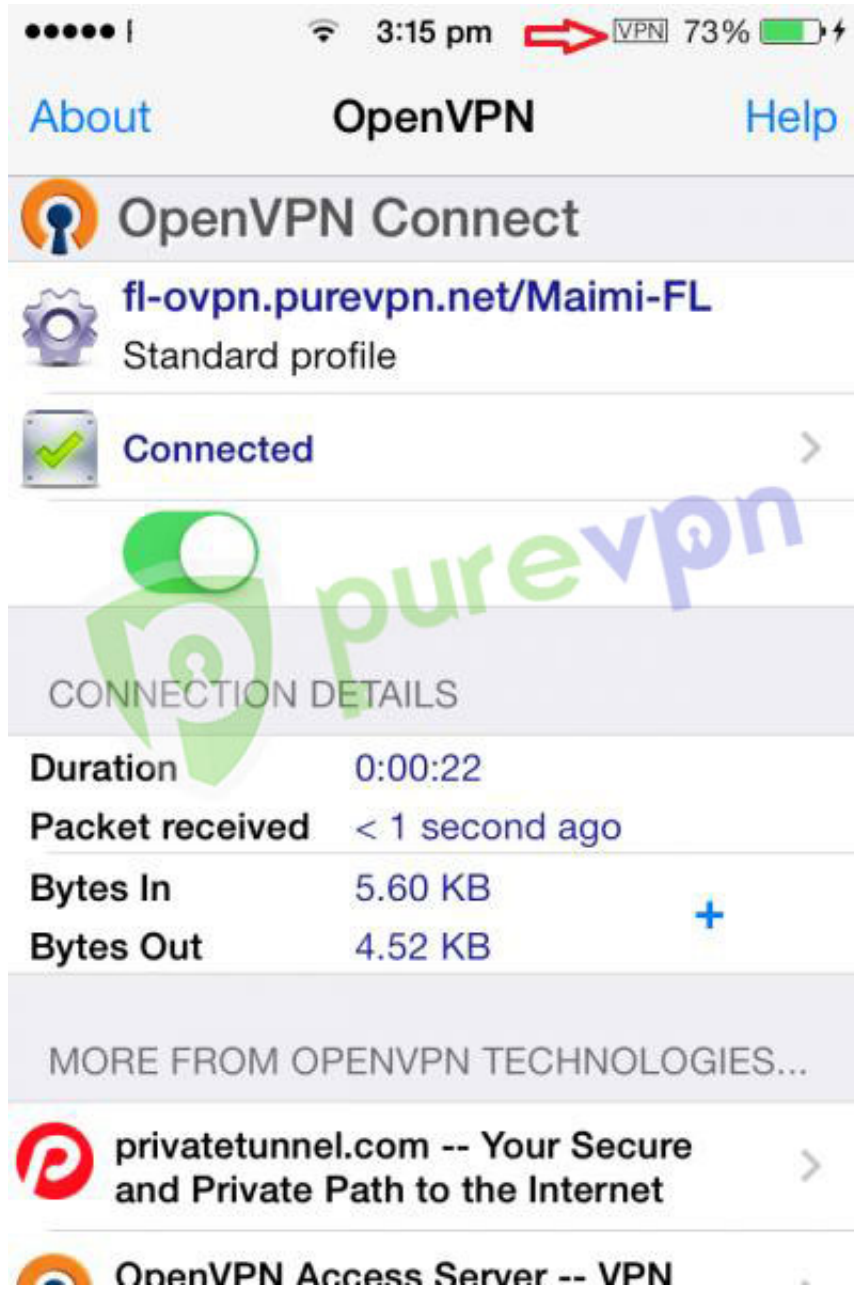

4 Tap on “+” icon to add profiles one by one.

5 Insert **Username and Password** provided by **PureVPN**, tap on **Save button** and **turn on VPN**

6 Once VPN will connect, VPN Icon will appear on status bar
