

Why Should You Trust PureVPN – An Honest PureVPN Review

Why should I trust PureVPN? This is a very common question asked by many visitors of this website.

To begin with, PureVPN is among the few VPN service providers with their own self-engineered and self managed network of 2000+ servers in 140+ countries. Furthermore, all the apps and software employed by PureVPN is proprietary, meaning the company had developed them in-house and owns its codes.

Cnet said this in their PureVPN review:

“With data retention now in the law books, PureVPN is more popular than ever with Australians looking to cover their tracks online.”

With an extensive network of servers placed strategically across the globe, PureVPN offers 80,000+ IPs to make its users completely anonymous and practically invisible.

PureVPN review by Mashable:

“PureVPN anonymises Internet activity, and consumer advocacy group Choice has ranked

it among the top VPNs to use.”

As for the security of its users, PureVPN employs military-grade 256-bit encryption to make sure that the data of its users is always far away from the reach of hackers and data sniffers.

PC Magazine has confirmed the same in their PureVPN review:

“PureVPN protects online activity so that users don’t have to worry about who may be trying to track what they are doing online.”

What makes us happy is seeing our users happy, and that’s exactly what the PureVPN review on TrustPilot reflects:

Moreover, an internet user does not need to take the company’s word for it as there are many other leading independent entities that have reviewed PureVPN services over time. Here is what some of them had to say in their PurePVN review:

PureVPN review by Fix the Photo:

“PureVPN is one of the fastest VPN services on the market.”

This provider supports all existing platforms and has a user-friendly interface in several languages. It is a perfect variant for those who need access to a large number of servers or exotic countries. Moreover, it allows connecting up to 10 devices simultaneously.
