

Secure Connection on Your Campus

It's a common practice for network administrators in schools or colleges to block access to social sites like Facebook, Twitter, and Snapchat as well as streaming platforms such as Netflix, Hulu, and HBO. Torrenting on college Wi-Fi networks is usually something students can only dream about.

While the purpose of blocking these sites is to have students focus on their education, who doesn't want to get some air online.

With a VPN, students can dodge restrictions placed by their schools' network administrators. When connected to a VPN, students can rest assured about their online presence and current location, making website accessibility a piece of cake. With encryption in place, all outgoing and incoming traffic is secured end-to-end.
