

Set up PureVPN with OpenVPN for Arch Linux OS

So you want to work on your Arch Linux securely and anonymously? Well, you can do that by checking out this guide and learning how to set up PureVPN on your Arch Linux OS via Openvpn.

Enter `pacman -Syu` in Terminal as root/ super user to update Arch Package Repository.

Make sure that you keep checking the latest updates sporadically. Now, follow these steps:

- 1 Download PureVPN Config Files for OpenVPN TCP and UDP from [here](#).
- 2 Go to your 'Downloads' folder and extract the downloaded config files' folder. (Or you can extract it from Terminal using "unzip" command).
- 3 Now, you need to install OpenVPN. Open Terminal and enter this

sudo bash

pacman -S openvpn

Press "**Enter**"

Write 'y' for confirmation and press "**Enter**".

OpenVPN will be downloaded shortly

- 4 Now, you need to access OpenVPN config files directory. Write these commands in terminal.

cd Downloads

cd Fastestvpn_ovpn

cd TCP_Files (OR **cd UDP_Files** whichever protocol you want to connect to).

Press "**Enter**"
