

## PureVPN for Downloading

The internet was always meant to be free, without any shackles holding us back. However, for ISPs, profit trumps freedom! But you can now take back your freedom by using a VPN to outsmart ISPs at their own game. It's finally time the little man strikes back!

- **ISP Throttling for High Speed:** ISPs often throttle your speed if you're using too much bandwidth. However, with a VPN, you can outsmart ISPs at their own game. (Be Proactive, Stay Safe! Use a VPN.)
- **Unlimited Downloading:** Download whatever you want from wherever you want and most importantly, download as much as you want! (Be Proactive, Stay Safe! Use a VPN)
- **Access Desired Content:** With a VPN, you can watch or read anything you want over the internet, regardless of your location. (Be Proactive, Stay Safe! Use a VPN)
- **P2P File Sharing:** Make sure everything you share over the internet is safe to use. Protect yourself from malwares, ransomwares, etc. by using a VPN. Don't wait till you become a victim. (Be Proactive, Stay Safe! Use a VPN).
